## **SMZ**

# ZANZIBAR EXAMINATIONS COUNCIL FORM THREE ENTRANCE EXAMINATION

# 053 ELECTRICAL ENGINEERING SCIENCE

TIME 2:30 HOURS FRIDAY 1<sup>ST</sup> DECEMBER, 2017am

## **INSTRUCTIONS TO CANDIDATES**

- 1. This paper consists of sections A, B and C.
- 2. Answer ALL questions in sections A and B and any three (3) questions from section C.
- 3. All answers must be written in the space provided.
- 4. Write your examination number on every page of this booklet.
- **5.** Calculators and cellular phones are not allowed in the examination room.
- 6. Use a blue or black pen in writing. The diagrams must be drawn in a pencil.

| 8        |       |             |              |       |           |
| TOTAL    |       | •           |              | •     |           |

This paper consists of 15 printed pages.

# SECTION A: (10 marks)

# Answer all question in this section

| 1. Choose | e the letter of the cor | rect answer and         | write it below the item   | number                    |
|-----------|-------------------------|-------------------------|---------------------------|---------------------------|
|           | in the table below.     |                         |                           |                           |
| i)        | A parallel circuit      | consists of two r       | esistors each having a    | resistance of $5\Omega$ . |
|           | The effective res       |                         |                           |                           |
|           | Α. 2.5Ω                 | Β. 2.4Ω                 | C. 3Ω                     | D. 5Ω                     |
| ii)       |                         | distance causined to as | g attraction or repulsior | n due to magnetic         |
|           | A. Magnet               |                         | B. Magnetic field         |                           |
|           | C. Magnetism            |                         | D. Ferro-magnet           |                           |
| iii)      | Which of the foll       | owing is not a fo       | orm of energy?            |                           |
|           | A. Heat                 | B. Weight               | C. Light                  | D. Sound                  |
| v)        | The value of 17         | 2K in Celsius sca       | le is                     |                           |
|           | A. 101 <sup>o</sup> c   | B445 <sup>0</sup> C     | C. 445 <sup>0</sup> C     | D110 <sup>o</sup> C       |
| v)        | Which of the fol        |                         | epresent the instrumen    | t used to measure         |
|           | A                       |                         | <u>B.</u>                 | _                         |
|           | C                       | _                       | <u>D.</u>                 |                           |

| vi)   | The rate at which energy is dissipated is known as   |        |        |               |                             |                       |       |                |        |        |   |
|-------|--|--------|--------|---------------|-----------------------------|-----------------------|-------|----------------|--------|--------|---|
|       | A. Electrical Power  |        |        |               |                             | B. Electrical energy. |       |                |        |        |   |
|       | C. Mechanical energy.  |        |        |               | D. Electromotive force.     |                       |       |                |        |        |   |
| vii)  | A wire of length 9m and radius of 0.05cm has a resistance of 5 $\Omega$ . The resistivity of the wire is |        |        |               |                             | The                   |       |                |        |        |   |
|       | A. $4.34X10^{-7} \Omega m$ B. $10.5X$  |        |        |               | 5 <i>X</i> 10 <sup>-3</sup> | X10 <sup>-7</sup> Ωm. |       |                |        |        |   |
|       | C. $4.36X10^{-7} \Omega m$ D. $20.5X10^{-4} \Omega m$  |        |        |               |                             |                       |       |                |        |        |   |
| viii) | ) The boiling point of water is  |        |        |               |                             |                       |       |                |        |        |   |
|       | A. 100°C B. 150  |        |        |               | 150                         | <sup>0</sup> С.       |       |                |        |        |   |
|       | C. 200°C   |        |        |               |                             | D                     | . 250 | )°C.           |        |        |   |
| ix)   | A current of 6m.   | 4 flow | s thro | ough a        | a radio                     | resis                 | tor o | f 2 <i>K</i> Ω | ι. The | p.d is | 1 |
|       | A. 6V  |        | B.     | 24 <i>V</i> . | C. 12 <i>V</i> . D. 0.6     |                       |       |                |        | δV.    |   |
| x)    | Materials which cannot be classified as either conductor or insulator                                    |        |        |               | ٢                           |                       |       |                |        |        |   |
|       | A. Conductor B. Insulator  |        |        |               |                             |                       |       |                |        |        |   |

|       |  |        |        |               |                             |                       |       |                |        |        |   |

# SECTION B: (30 Marks) Answer ALL questions from this section.

|                | Define the following terms:   |
|----------------|---|
|                | i) Potential difference (p.d)   |
|                |   |
| -              |   |
| -              |   |
| -              |   |
| -              |   |
|                | ii) Electromotive force (E.m.f)   |
| _              |   |
| _              |   |
| _              |   |
|                |   |
| _              |   |
| _<br>_<br>a) l | Inder what condition(s) does an electric shock occurs?  |
| _<br>a) l      | Inder what condition(s) does an electric shock occurs?  |
| a) l           | Inder what condition(s) does an electric shock occurs?  |
| a) l           | Under what condition(s) does an electric shock occurs?  |
| a) l           | Jnder what condition(s) does an electric shock occurs?  |
| _<br>a) l<br>  | Jnder what condition(s) does an electric shock occurs?  |
|                | Inder what condition(s) does an electric shock occurs?  Briefly explain the effects caused by electric shock. |
|                |   |
|                |   |
|                |   |

| b) | Name any two (2) examples of dielectric materials.   |
|----|--|
|    |  |
|    | t down any four (4) precautions that should be taken to avoid electrical cidents in a workshop.          |
|    |  |
|    |  |
|    |  |
|    | A voltage drop of $120V$ is measured across a resistor of $60~\Omega$ . Calculate the i) Current flowing |
|    |  |
|    |  |

| 7.  | a) Define the term magnetic field.                        |
|-----|---|
| -   |   |
| _   | b) Draw a diagram that shows the magnetic poles.          |
|     |   |
|     |   |
| 8.  | a) Define a cell.   |
|     |   |
|     |   |
|     | b) Distinguish between a primary cell and secondary cell. |
|     |   |
|     |   |
|     |   |
|     |   |
| . ' | Write down the units for each of following quantities,    |
|     | i) Magnetic flux.   |

9.

# ii) Magnetic flux density. iii) Inductance. a) State ohm's law. 10. b) Determine the current flowing through a filament lamp rated 240V, 40W. a) Define specific heat capacity of a substance 11. b) Convert 33°C in to K

# **SECTION C: (60 Marks)**

# Answer any three (3) questions.

| 12: | a) | What do you understand by resistivity of a conductor?  |  |  |  |  |  |
|-----|----|--|--|--|--|--|--|
|     |    |  |  |  |  |  |  |
|     |    |  |  |  |  |  |  |
|     |    |  |  |  |  |  |  |
|     |    | b) A current was sent through a wire having resistance of $10\Omega$ which is                |  |  |  |  |  |
|     |    | fully immersed in 2kg of water. At the end of 15 minutes, the rise in                        |  |  |  |  |  |
|     |    | temperature was observed to be 60°C. Determine the value of current.                         |  |  |  |  |  |
|     |    | Assuming that: Specific heat capacity of water $=4200K/kg^{0}C$ Heating efficiency $=90\%$ . |  |  |  |  |  |
|     | _  |  |  |  |  |  |  |
|     | _  |  |  |  |  |  |  |
|     | _  |  |  |  |  |  |  |
|     | -  |  |  |  |  |  |  |

| b) Determine the efficiency of a water heater which heats 140 litres of water from |
| $10^{\circ}$ C to $60^{\circ}$ C in 3hours.The water is heated by a $3KW$ element. |
| Assuming that,   |
| 1 litre of water is equivalent to 1kilogram,                                       |
| Specific heat capacity of water is $4180J/kg^0\mathrm{C}$                          |
